

The Business of the Month spotlight is shining on Buckman Iron & Metal, Inc. 3980 Portland Street, Coplay, PA.

The family owned business has been serving the scrap metal recycling needs of the greater Lehigh Valley for over 100 years. The company provides a full range of comprehensive scrap management services and technically advanced scrap handling equipment to all types of industrial accounts through out the Eastern Pennsylvania. They are able to collect ferrous and non ferrous scrap from the metal working industry, metal service centers and other sources by providing in-plant accumulation and retrieval bins and/or truck containers at their facilities which are then transported to the processing facility. They also accept junk cars and as well as well as house hold scrap metal from the public including computers, laptops, cell phones, key boards, etc.

Prices paid for scrap metals, on a delivered basis are determined primarily by market demand and the composition, quality, size and weight of the materials.

Per Terry Buckman, President, “Doing business with us means doing business with the very best. Our substantial investment in processing equipment and an extensive truck fleet ensures the highest level of service. Our mission is to serve customers and produce high-quality product safely. IF we can not do it safely we will not do it at all. We want to be your one stop facility for all your scrap metal recycling.”
